

East Texas Medical Center

Project name: East Texas Medical Center
Data Center Project

Location: Tyler, Texas
Address: 801 Clinic Drive
Tyler, Texas 75201

Completion Date: October 2008

Company: EMTC

Project overview

More than a million people call East Texas home. They live in communities ranging in populations from fewer than 500 to more than 50,000.

And every year, ETMC serves more than 300,000 of them.

ETMC's strategy is to provide care in rural areas whenever possible.

The system is organized so that primary care is provided in the rural health clinics. Secondary care is also provided locally in the ETMC affiliate hospitals. High-level secondary and tertiary care is provided at ETMC Tyler.

ETMC EMS provides emergency care and medically necessary transportation within the region and ETMC Home Health covers the entire system.

ABLE solution

ABLE Communications, Inc. was selected by East Texas Medical Center and Acuity USA to provide the Telecommunications Cabling Infrastructure, Equipment Cabinets and Overhead Bracing Support Structure of a Data Center.

The Structured Cabling System is a Systemax GigaSPEED solution utilizing Category 6A for the copper connectivity and InstaPATCH multimode 50um armored cable for the fiber connectivity. All

infrastructure was placed in 55 Server Cabinets and Distribution Cabinets provided and installed by ABLe Communications, Inc. This truly was a "Showcase" installation.
