Project overview

Montgomery Coscia Greilich LLP is a full-service professional accounting firm with expertise in traditional accounting services as well as mergers, acquisitions, divestitures and systems consulting. They are among the largest local firms in the DFW area and currently employ over 100 professionals.

ABLE solution

ABLE Communications, Inc. was selected by MCG and Primetric Consultants to provide the Telecommunications Cabling Infrastructure and Audio Visual system for MCG's New Corporate Headquarters in Plano, Texas. This facility covers 34,000 square feet and is home to over 100 employees.

The Structured Cabling System is a Pan/Gen Category 6 copper connectivity solution utilizing Panduit and General Cable. Hoffman cabinets and equipment racks were installed in the network closets to support the structured cabling and customer equipment. Over 400 Category 6 cables were installed along the RG6 cable to support 42" flat panel LCD televisions throughout the building.

An audio visual system was designed and installed to support (2) state of the art and easy to use conference centers. Each conferencing center was setup as a standalone entity equipped with the latest

technology. Each conferencing center received the following:

1. A motorized 110" projector screen with a drop down ceiling projector mount and NEC 4200 lumen projector.
2. A Nexia phone system with in-ceiling microphones and speakers allowing the customer to dial the phone and control the entire room through a Crestron controller.
3. A 55" LCD television on the opposite side of the room and integrated it into the system for multiple viewing.
4. An in-wall holder and charger for the Crestron controller.
5. A fully loaded Middle Atlantic equipment cabinet with fans and rotatable for easy access.
6. Under floor VGA connections for the conference room table through Category 5e/VGA extenders.

This is truly a "Showcase" installation.
